

August 2014: Tilbury Liaison Committee to be Established

Now that the Tilbury Green Power Project is approaching the construction phase, Tilbury Green Power Ltd is establishing the Tilbury Liaison Committee (TLC). The TLC will be run by Bellenden, an independent communications company appointed by Tilbury Green Power.

The Tilbury Liaison Committee is a quarterly meeting for invited stakeholders to meet with representatives from TGP to discuss the construction and operation of the generating station. The objective of the group is to facilitate communications between TGP and the local community.

The meetings will be held once every three months, and each meeting will be themed to discuss a specific issue or topic around the project; usually suggested by the members. The first meeting will be an introduction to the power station project and a review of the current construction timetable. There will also be a review of the work done to date by TGP to deliver local employment benefits during the construction and operation of the power project.

A notification of each meeting will be published on this page, along the minutes of each meeting once they are confirmed.

The first meeting will be held on Wednesday 13th August 2014. Any questions concerning the project – or suggested agenda items – can be raised with local representatives who sit on the Liaison Committee.

The membership of the group and contact details will be published shortly.
