

## NEWS RELEASE

### ACTIVITIES ON SITE

15 May 2015

Tilbury Green Power (TGP) would like to bring you up to date with what's been happening on its site in Tilbury Docks.

We have recently begun a ground survey. This is part of the preliminary work necessary before construction of the generating station gets underway. TGP's contractors are using mobile equipment to check on ground conditions. The work is likely to continue during June and July.

Later in May, TGP will start to remove some concrete structures which lie just below the surface of the ground. These are part of the old factory foundations. The work will involve digging them up and crushing the concrete. The crushed concrete will be re-used on site and the work will continue during June and July.

After that, probably starting in July, TGP will start to construct the new foundations for the generating station.

We will post more updates on the construction of the generating station as works progress.

#### Notes:

Tilbury Green Power Limited is constructing a renewable power plant fuelled by waste wood, within the Port of Tilbury on the banks of the River Thames.

The Plant will have capacity of around 40 megawatts (MW) and will produce up to 319,000 MWh of renewable electricity each year – enough to supply around 97,000 average homes, and will play a valuable role in the UK meeting its target for producing 20% of its energy from renewable sources. The Plant will utilise around 270,000 tonnes of waste wood sourced from the region.

The Tilbury Green Power Plant is being developed by Tilbury Green Power Limited, the major shareholders of which are ESB and the Green Investment Bank.

Further details on the Project can be found on our website: [www.TilburyGreenPower.com](http://www.TilburyGreenPower.com)
