

## NEWS RELEASE

### TILBURY GREEN POWER PROJECT COMMENCES CONSTRUCTION

27 August 2015

Tilbury Green Power (TGP) is pleased to confirm that today, 27 August 2015, the Tilbury Green Power Plant formally commenced construction.

Mark Lawlor, TGP's Construction Manager, said "This is an important day for the project. Having agreed all necessary conditions of our planning consent with Thurrock Council, the Tilbury Green Power Project has formally commenced construction with the laying out of the Plant's main access road.

We look forward to delivering a successful project in 2017, when we will be producing enough renewable energy for around 97,000 average homes."

#### Notes:

Tilbury Green Power Limited is constructing a renewable power plant fuelled by waste wood, within the Port of Tilbury on the banks of the River Thames.

The Plant will have capacity of around 40 megawatts (MW) and will produce up to 319,000 MWh of renewable electricity each year – enough to supply around 97,000 average homes, and will play a valuable role in the UK meeting its target for producing 20% of its energy from renewable sources. The Plant will utilise around 270,000 tonnes of waste wood sourced from the region.

The Tilbury Green Power Plant is being developed by Tilbury Green Power Limited, the major shareholders of which are ESB and the Green Investment Bank.

Further details on the Project can be found on our website: [www.TilburyGreenPower.com](http://www.TilburyGreenPower.com)
